world coordinate system (WCS) is the mapping of the location of any object in the world into the drawing. By default, the location of an object is specified using a Cartesian coordinate system, a three-dimensional coordinate system based on the XYZ axes. Although AutoCAD's API uses the standard IEEE double precision floating point type for numbers, the product and application interfaces for architectural, engineering, and construction (AEC) and construction (CAD) users use IEEE single precision floating point. The engineering industry uses IEEE single precision floating point for coordinates, and integers.
