## What's New in the?

Yodot PPT Repair is a lightweight solution that will help solve this problem if it ever occurs. A simple and straightforward recovery tool "Simple" is already too much to describe just how this tool presents itself. Everything about it is lightweight, from the number of buttons that can be pushed (just one) to the number of menus and settings available (none). Once you open the app, all you see is a window with a field where you input the location of the damaged PPT file on your HDD. Once you've done that, you can specify where to export the newly repaired presentation, press the "Repair" button and you're done. An app that sacrifices control in favor of simplicity While this incredible simplicity is indeed welcomed by those with little experience using such similar software tools, it can be a turn-off for those that like to have a little more control over what's going on. For example, you have no way of telling what exactly are the "repairs" until you see the actual result. One thing worth mentioning is that the program will not run if any program from the MS Office package is open, meaning that you cannot manually "preview" the "before" and "after" results. An overall good PPT recovery tool Yodot PPT repair doesn't bring anything new to the table, and it certainly doesn't score points for original design, but its simplicity and overall lightweight feel that it has makes it an excellent addition to anyone's digital library. Description: This little app, despite being made by Microsoft and even working like the latter's official PPT repair tools, is designed to help fix damaged PPT files for all those many occasions when you need to recover a PowerPoint presentation without having to install Office 2013. One can hardly imagine a better problem to have to solve, as nothing beats a PowerPoint presentation that you need to open but ends up being corrupted or unreadable. Having to re-open a presentation is by no means pleasant, and if the damage is so significant that it ends up being impossible to retrieve the original content, then you would certainly be in a predicament that you wouldn't want to be in. If this is the case, then you need to download the app, open it and follow the onscreen instructions. Once you do that, you will be asked to specify the location of the damaged PPT file, where it is on your hard drive. Then, you can export the presentation by choosing where to save it, which you should consider a good thing as it will make sure that the
