One of the problem with a network-connected printer is that sometimes it doesn't seem to know that the toner cartridge is empty. I bought a new toner cartridge and tried to use the printer to print out a simple page to check the toner level. I was surprised to discover that the printer even tried to print the empty page. It had the usual "No toner" message, but it also wanted to print a toner-filled page. I've been using this app for a while now and it's definitely a great printer resetting utility. The only problem I have is that the settings take a while to save if you have a toner-jam (like I do). It really doesn't take much time, but it's kind of annoying to have to wait for the save dialog box. After all, the whole point of this app is to free up some printer resources. Overall, this is a nice app. It's simple to use, and it

X-linked hypophosphatemia in adult patients with idiopathic FGF23-dependent renal phosphate wasting: a clinical and molecular approach. X-linked hypophosphatemia (XLH) is the most common inherited form of rickets and results from mutations in the fibroblast growth factor 23 (FGF23) gene. Patients with XLH typically have lifelong hypophosphatemia, rickets, and abnormal renal phosphate handling. We hypothesized that adult patients with FGF23-dependent renal phosphate wasting have XLH. We studied 40 patients (31 women, 9 men) with idiopathic renal phosphate wasting and renal Fanconi syndrome and documented FGF23 elevation. Serum phosphate was measured at baseline and, after phosphate repletion, at monthly intervals. Routine biochemistry, bone densitometry, and hemogram were also performed. Molecular analysis of the FGF23 gene was performed in 11 patients. The mean age of patients
