MuseScore is a powerful music studio dedicated for users of all experience levels. Support for a decent number of formats gives you the possibility to make use of the final result in

more ways, while freedom to customize nearly all aspects lifts all limits of creating music the old-fashioned way, namely with notes and staves. Mp3Tag is a tool that allows you to create and modify the ID3 tag of music files. This tag

is found in the beginning of many digital music files and is very important for music players as they can use the ID3 tag to automatically identify the type of the music file. In this tutorial I show you how to use the "MP3Tag" tool

from MacSoft to create the ID3v2 tag (sometimes also called v1) for your music files. It will allow you to tag MP3, WAV, AIFF, and AAC files with id3 tags. Note: While not every MP3 or audio file created before the 1999 edition

of the ID3 tag standard can be tagged using the ID3 tag you see in this tutorial, the majority of new releases, and all of the more popular older releases, can be tagged.

1. This tutorial assumes you already have an MP3, WAV, or AIFF music file. 2. I created

this tutorial with iTunes but the same process works with MP3Tag. 3. If you need help with a particular file format or you get stuck with a problem, ask in the comments. 4. Also, if you have any suggestions for future

tutorials, or find any mistakes in this tutorial, please feel free to ask and I'll be glad to add them! 5. Of course, if you are interested in hearing all the details of how to use iTunes or MP3Tag, please take a look at the links below!

Q: Commutation
between angular
momentum and S_z
component of isospin I
am confused about the
commutation relation

between isospin and
 J_z component of
 angular momentum J

$$\left[\hat{\vec{J}}, \hat{J}_z \right] = i \hat{J}_y$$

$$\left[\hat{\vec{J}}, \hat{J}_y \right] = i \hat{J}_x$$
 My
 question is about the
 following: Does this
 imply the following
 property that J

$$\left[\hat{\vec{J}}, \hat{J}_x \right] = i \hat{J}_y$$

\hat{J}_z

\hat{J}_x ?

A: I don't think so. The operators you defined act on states in the following way:

$$\begin{aligned} J_z |j, m\rangle &= m |j, m\rangle \\ J_- |j, m\rangle &= (-1)^{j-m} |j, m-1\rangle \end{aligned}$$

\end{split} For a transition from state $|j_0 m_0\rangle$ to state $|j_1 m_1\rangle$ you have

$$\begin{split} (J_$$
