* If you have the time and money, get Photoshop CS5 (or better). It has been rewritten and is more intuitive and user-friendly than older versions. You also get more features, although it's not clear whether you will find these useful for your hobbyist

needs. * If you don't have time or money, try ImageReady CS6. You can use the program's grid tool to create a guide for trimming and cutting images into a rectangles, squares, circles, ovals, and so on. You can also use it to create an outline using the pen tool, or to create an

outline around portions of an image. * If you want to learn to use Photoshop, use its tutorials. They are free and easy to follow. You can also find lots of Photoshop tutorial books on the market. * Photoshop is a bit pricey at around $600, so don't spend more than

you can afford. However, if you can purchase and use the program, then you have truly mastered your skill. * Another alternative is Lightroom. It is an Adobe company product designed for managing the creation of images. It also has features to make adjustments to

images. The program is priced from $100 to $300 and does not require the purchase of an Adobe Creative Suite. Before beginning to edit your first image, you should check its metadata. Metadata is data about your image that is stored in its image file, such as the date it

was taken, the aperture used, the focal length of the lens, and the shutter speed. If you don't know what metadata is or how to check it, you can use the tool provided by the popular image editing program, Photoshop, to check the metadata. ## Opening an Image Let's get started by

opening an image. To open an image in a program, click the Open button. In this example, we opened a photograph taken with a point-and-shoot camera that allows you to choose among several options in how the photograph will be opened. This is a fairly simple camera, allowing

you to choose among these options: * Photo * Small * Medium * Large * Original * Snapshot To choose which option you want, click the appropriate selection from the drop-down menu. The image opened is in a larger size than the size shown in Figure 1-1 (To check the size, right-

Q: Force a CSS property to be non-zero/non-null for the entire document Is there any way to make a CSS property such as background-size: cover 100% 100% be non-null/zero for

the entire document? It needs to always be the same as the width/height value, no matter what the user changes. Another detail is that this doesn't affect the element's width/height so it shouldn't increase the document's size. I tried to add it to :root but it doesn't work. I'm

not sure if the following code I came up with is the proper way to do it either, but it's what I thought of first: *:root { background-size: cover 100% 100%; } A: You need to do this: :root { background-size: 100% 100%; } This will make the property 100% for the whole document as you

want it. Also, you don't need the * selector, you can do this: *:root { background-size: 100% 100%; } Q: Find out how many time a particular string occurs in text in pandas (python) Here's the text file **author** : **Anna Eriksson** **title** : **R: How to cook an egg** **day** : **2019-05-09**

month : **May** **year** : **2019** **pinci** : **0.9** **disease** : **0**

preversion : **I have never done this.** I'm trying to find out how many times has the line preversion appears. I was using numpy.count_nonzero function. I was able to obtain the desired result but

couldn't figure out how to achieve it in a more effective way. This is the code I used import pandas as pd test = pd.read_table('sample1.txt') count = np.count_nonzero(test['preversion'], axis=1) print(count) In my case, the desired result should be 3 Because it occurs three times in the

text. A: You can use
