Field of the Invention The present invention relates to a guide rail rail for guiding a slide member moving relative to a case body. 2. Description of the Related Art A rail assembly is mounted to a case body as a guide for a slide member such as a sliding door for a vehicle, such as a door opening/closing device of an automobile. The rail assembly includes a guide rail, and a roller is attached to a sliding member or the case body, so as to be guided by the guide rail. Japanese Patent Application Laid-open No. 2005-192317 discloses a rail assembly for guiding a door, in which an elastic joint is used to improve the rigidity of the rail assembly. Japanese Patent Application Laid-open No. 2005-192317 further discloses a rail assembly including a case body having a recess, and a back plate for covering the recess from an upper side of the recess. The back plate is formed by punching and bending a metal plate into a U shape, and a notch is provided in a part of the back plate. The notch is engaged with an elastic member. Thus, the rail assembly disclosed in Japanese Patent Application Laid-open No. 2005-192317 is formed by simply bending the metal plate into a U shape and by integrally forming the rail assembly from the metal plate. rien à voir avec la catégorie négationniste et antifasciste de la rage.
