Business Process and document management Project database tools such as Project Alchemist, ProjectConnect, Project Combustion, and ProjectWise help you manage all your AutoCAD drawings, enabling a consistent and simplified approach to managing your projects. ProjectWise is a Microsoft Office Add-in that integrates with AutoCAD and enables the user to perform project activities with greater efficiency and consistency. User Interface AutoCAD uses a large number of menus and toolbars, which can be adapted to a wide range of applications. A number of user-interface and customization tools have been developed by third-party suppliers, including RadCAD, which enhances the AutoCAD interface, and MCAD (MCAD Associates, Inc.), which uses the original AutoCAD functionality with minor modifications to produce an application for architecture and building. Autodesk released a new and improved user interface for AutoCAD in 2006 called Insight. In 2017, Autodesk released Insight 16, which is now the latest version of the interface. AutoLISP AutoLISP (Automatic LISP), was a variant of LISP developed by Autodesk in conjunction with Macromedia, and available for the release of AutoCAD 2004. AutoLISP is a language to write AutoCAD extensions and macros. Because of the asynchronous execution of the commands, AutoLISP requires the script to be divided into commands or functions. Each command is a list of properties or parameters, and each function executes a single command. In AutoLISP, a command is like a word in a list. For example, to make a loop through the command ListOfCommand, the user would start with the command command, then add the property commands to it. After the command ListOfCommand executes, it returns to the command command. Each command after ListOfCommand in the list of commands executes after the previous one has been completed. Therefore, if you have more than one ListOfCommand in the list, they will all execute at the same time. This style of writing a script is not recommended in current versions of AutoLISP. In addition to the command function, AutoLISP has commands that let the user create dialog boxes and menus, as well as to move, scale and rotate objects. Visual LISP Visual LISP (Visual LISP, originally Logiciel Libre, was developed by the Commun ca3bf1094
