We have studied the growth pattern of two cell lines, B2 and BLL1, established from primary transitional cell carcinomas of the urinary bladder. The cultured cells exhibit an epithelial shape, and grow as clusters and as individual cells. The clusters are stable and they can be passaged for several generations. The neoplastic nature of the cells is indicated by the appearance of the same morphological pattern in the in vitro growth and the in vivo tumors. The tumorigenicity of the cell lines is further supported by the observation of the same pattern in the 3 secondary tumors and the in vitro growth in soft agar. Hey guys sorry for the delayed responses, I've been busy as hell this last month. But since I know you really need this, here's a new map for everyone. I kept the pinestone layer that we have in the game, however i replaced the terrain of some lands with other nice grassy color. There are still lots of things to do and I really need more of your help in the art department. If you have any questions, don't hesitate to contact me.
